

## SYNOPSIS Continued

For the rest of us it's a choice of travelling from A to B in comfort and knowing that there are ample stops along the way to take on fuel – be it in the car or the stomach. Maybe I should have said AMPOL stops along the way because, yes, Ampol, our very own oil company, are back and intend to stay.

The Great Southern Road encompasses the Eyre Highway from the west as it doubles as the Nullarbor Plain then the Great Ocean Road (Part of the 1977 London to Sydney Marathon route) and the Monaro Highway on it's path to the east.

This publication, proudly sponsored and supported by Ampol Australia, will add even more comfort of information to the adventurous travellers planning their next holiday. Not only can you plan your trip and the distance you will drive between towns and roadhouses, but we provide coordinates to set into your navigator and take you to the front door of your next hotel, motel or caravan park.

Even the jaws of Ampol drop when they see the unbelievable sights and natural attractions along our southern coastline. Many of them are only to be found in Australia and are a drawcard for thousands of overseas visitors.

You see, there is no need to waste precious time and money battling with customs and over crowded cities when you can point your noses east, west, north or south, depending from where you commence your travel, and discover the world class beauty and wonders that are to be found here, in Australia, along our very own Great Southern Road.
